**What do you know about epilepsy?**

Match the statements below. Find the answer at the page on the QR code.

At what age can a person get epilepsy?

Epilepsy is a brain disorder caused by seizures.

How do you cure epilepsy?

They are a bit like a sneeze. Our brain cells, called neurons, sometimes become too active and send too many messages around. This causes seizures.

What are seizures?

People of every age can get epilepsy - babies, girls, boys, adults and grandparents!

What is epilepsy?

There is no cure for epilepsy. However most people with epilepsy control their seizures with medication.
